

REMARKS

As currently set forth, claim 1 calls for a channel that extends completely through at least one of said substrates. This would allow fluid circulation from one side to the other. Thus, the dead ended circulation, shown, for example, in Figures 9 and 10 of the cited reference, is unnecessary. Moreover, the inclusion of a central structure to provide the U-shaped arrangement is unneeded. Better flow-through characteristics can be achieved for better treatment with the claimed invention.

Therefore, as amended, the application should be in condition for allowance.

Respectfully submitted,

Date: June 14, 2005
